

Dellvit

Main Website: As stated in the Design that is provided to you.

Add:

Search, Cart, Orders, Outlets, About, Contact us, Login and Signup at the top Header.

In the design where it says enter your location, that should be functional and it should show products and outlets according to the location set, keep in mind that while listing the products we add the location of the product so it will be used here for this search reference.

For Contact provide the following:

Email: dellvitsupport@gmail.com

Phone: 03169212708

Address: 6th Road Rawalpindi.

When clicked on the product images make sure it opens the product and shows the details like the price, quantity, what is included and what is not, also the approximate delivery time.

on the side it should ask for the delivery information, which in case of account holders should directly fetch their details like their phone number, email, address, and other details, also leave an option for change delivery address for this order which will change address for that specific order but not from their profile. And also Leave an option for Notes.

For the Admin Dashboard: We want access to control most of the things like adding new outlets: which will include their Name, Phone, Email, Location, Their customer ID which will be used to locate their products under their page, These outlets should be able to login to the DELLVIT portal specifically designed for them to add or remove their products, this ID will be used for the login with a password. Also, we should be able to receive add or delete their documents in the Admin Dashboard whose access will NOT be provided to the outlets.

For the Product listing: We should be able to add the Product Name, Quantity, Pictures, Price, Location, Discounts and Deals, etc.

For the Rider Portal: when received an order, a rider should be assigned to the order and the rider will be able to see the following details.

The order pickup location, the order's drop location, The Total amount to collect if that's a cash on delivery, and Map integrated in the portal to show the rider the path to the location. And His time left to deliver the order. The customer when place an order will receive two automatically generated numbers on his side which will be the Order Number for our Reference and the OTP which the customer will provide to the rider after delivery, that way we will be able to prevent, scams, and other frauds either from the customer or from the rider.

At the last of the Main website in the design there is a portion saying download now, currently we will use it as an ad space and will try to run ads.
